# Appendix 1
## Keywords

| | | |
|---|---|---|
| abstract | finally | return |
| assert* | float | short |
| boolean | for | static |
| break | goto | strictfp |
| byte | if | super |
| case | implements | switch |
| catch | import | synchronized |
| char | instanceof | this |
| class | int | throw |
| const | interface | throws |
| continue | long | transient |
| default | native | true* |
| do | new | try |
| double | null* | void |
| else | package | volatile |
| extends | private | while |
| false* | protected | |
| final | public | |

* These are not listed as keywords in the Sun documentation. However, some authorities list them as keywords. Preferring to err on the side of more safety, this book treats them as keywords.
